

Smarter customer calls for Concrete.

Zoho Desk history, visible with the Genesys call.

The information exists. The employee has to find it.

Manual phone-number search already finds the tickets.

The conversation starts with a search.

Call arrives. Context appears alongside it.

A caller-number lookup connects the two experiences.

Less searching. A more informed conversation.

Make the existing systems work together.

Bring Desk records into the employee's call experience.

Start with the pop-up already listed in the contract.

See the history. Pick up from the last update.

Customer details. Previous tickets. Latest recorded note.

LATEST RECORDED NOTE

**Branch review
is still pending.**

Continue from this update

Same caller. Same tickets. Fewer manual steps.

The change is in how the employee gets the information.

BEFORE

-  Use the number
-  Search in Desk
-  Find the last update

PROPOSED AFTER

-  History opens with the call
-  Read the last update
-  Continue with context

From finding the information to using it.

Less searching. More attention to the customer.

A practical improvement to the everyday call workflow.
